As stated in the course syllabus, every student is expected to behave with academic integrity: **do not cheat, plagiarize, or commit fraud**.

Fraud includes altering previously graded work; plagiarism includes using someone else’s work without proper credit. The following guidelines further detail these definitions:

- If you happen to find a solution to a problem in a written source (e.g., in a textbook or on the web) and use that solution, you should state the original source. It is **unethical** and **plagiarism** to use someone else’s work without proper credit.

- If you get help from someone (either a classmate or someone else) on a problem, you should state that (and give their name). Again, it is **unethical** to use someone else’s ideas without giving proper credit.

In both of the above cases, it is **cheating** and **fraud** to pass off something as being your work when it is not.

- In this course, it is **legitimate** to discuss problems with each other at a conceptual level: for example, it’s okay to figure out how to break a problem up into smaller, easier-to-solve pieces, or to discuss general approaches to solving a problem.

  **However**, the final solution must be your own: it is **not** legitimate to share code or other written solutions with anyone else. **All** participants in improper sharing are culpable: if person A sends work to person B, **both** parties are in violation of the academic-integrity policy.

- If you are unsure whether a certain action constitutes an academic-integrity violation, assume that it does and then ask us for clarification.

**Honor Pledge**

I have read and understood the course Honor Policy, and I hereby promise to abide by it. I realize that the penalty for breaking this policy is a failing grade (XF) for the course.
